SUMMARY

Full Stack Software Engineer and AI Automation Engineer with 2+ years building scalable products end-to-end. As founding engineer at a startup, shipped a platform serving zero to 300+ daily users. Built production AI systems including RAG pipelines, multi-agent orchestration, and LLM function calling. Daily user of AI coding tools (Claude Code, Cursor) for accelerated development. Core stack: TypeScript, Node.js, React, Python and PostgreSQL.

WORK EXPERIENCE

Founding/Head of Technology

CubeXTech Sdn Bhd | Subang Jaya, Malaysia | Jan 2024 – Mar 2026

- Designed and shipped platform from zero to 300+ daily active users across 3 properties - owned product decisions, architecture, and deployment
- Architected modular authentication system (OTP, JWT), and developed a Visitor Management System (VMS) serving 3+ residential properties (PJS 1, MMC Ampang, Sri Ara) using Google Apps Script and web technologies
- Built QR-based visitor management system with encrypted tokens, processing 500+ monthly QR scans
- Engineered React Native mobile app with Node.js/Express backend and PostgreSQL, with Prisma ORM
- Configured production deployment with Docker, SSL/HTTPS, and VPS security hardening

Full Stack Developer/IT Intern

Upcycle 4 Better (U4B) | Malaysia | Sep 2025 – Jan 2026

- Single-handedly developed the complete U4B mobile/web application for fabric donation and recycling rewards
- Built robust backend using 100% JavaScript with RESTful API architecture; frontend with 98% TypeScript for type safety
- Implemented user authentication, donation tracking with video verification, and QR code scanning for 49+ bin locations
- Created voucher redemption system integrated with partner stores (Zalora, Best Bundle)

KEY PROJECTS

Final Year Project – UAV Communication and Mobility

- Implementing reinforcement learning algorithms and Terahertz communication for enhanced UAV communication in FANETs
- Using NS3 network simulator to create real-life simulations of UAV mobility models

AI Engineering Portfolio

- Built end-to-end RAG pipeline using Langchain and Ollama, semantic vector search, cosine similarity, hallucination prevention, tested on real 68-page PDF document
- Implemented hierarchical multi-agent system with manager agent, LLM function calling with autonomous tool selection

EDUCATION

Bachelor of Computer Science (Honours) – Cybersecurity

Taylor's University, Subang Jaya, Malaysia | Jan 2022 – Jan 2026

A-Level and O-Level

Master Mind School, Dhaka, Bangladesh | Jun 2018 – 2021

SKILLS

Frontend: React, Next.js, React Native, Expo, Tailwind CSS

Backend: Python (FastAPI), Node.js, Express, REST APIs, JWT, PostgreSQL, Prisma ORM, MySQL, MongoDB

Languages: JavaScript, TypeScript, Python, Java, C++, SQL

Cybersecurity: Kali Linux, Risk Assessment, Network Defense, Threat Identification, Digital Forensics

DevOps & Tools: Docker, Git, SSL/HTTPS, CI/CD, AWS, AI-Assisted Development

Automation & AI/ML: N8N, REST API Orchestration, Prompt Engineering, RAG Pipelines, Anthropic API/OpenAI API, LLM Function Calling

Professional: Technical Documentation, Agile Development, Team Collaboration, Client Communication, Problem Solving

ADDITIONAL INFORMATION

Languages: English, Bangla, Hindi, Urdu

Certifications: Cisco – Introduction to Cybersecurity, Java Foundations, Advanced Python for Analytics, Evenesis Event Management

Awards: Dean's List Award (March 2022), Champion – Inter-University Student Team Tournament (2024 & 2025), President/Captain of Taylor's Pool Club (2023-2026)
